BIAP Global country validation - refreshed 2026-10-16 (Update 7)

- **Code validated:** `1da5cd69e12955d2363a9f16fd26a29824b7218e` (PR #52 head, `feat/global-evidence-signals`). Working tree clean. PR #54 head is `5671891d51ec3b6e322eb7e2aef693d179af24b9` (`fix/mobile-ios-icon-schema`, mobile-only; not part of this runtime validation).
- **Test window (UTC):** 2026-10-16T10:37:08Z .. 10:42:39Z. Re-run of all seven countries, 176 companies (US 26, GB/FR/IT/SE/NO/DE 25 each), top by market cap from each exchange's deep-scan cache.
- **Mode:** non-destructive, in-process API (`/global/instruments`, `/global/analyze`) with `BIAP_GLOBAL_ONLINE_FIRST=1` and `BIAP_GLOBAL_US_ISIN_RESOLVE=1` against an **isolated copy** of the production data (`/home/ubuntu/biap-validation-20261016/data-u7`, read from `/var/lib/biap-global`; no ESEF `esef/` or `sec-edgar` archives copied). No bulk downloads, no merge, no deploy, no service restart. A fingerprint (path/size/mtime) of production `scan-cache/` taken before and after the run is identical.
- **Tests:** full `pytest analysis/tests` on `1da5cd6`: **1442 passed, 0 failed** (87.7 s). Update 6 only re-ran 16 tests; the 1439 figure was measured on `4a906e9`.

How to read the numbers: verified vs estimated vs cached

Class	What it covers in this report
Verified	Fundamentals read from official filings (SEC EDGAR, ESEF/OAM, FCA NSM) with provenance `independently_verified`; evidence gates PASS/WARN/BLOCK; ISINs resolved from an official/open source (listing data, GLEIF, OpenFIGI); a **verified BUY_CANDIDATE** = call BUY_CANDIDATE **and** evidence PASS **and** governance ACCEPT **and** distress LOW_RISK **and** same-sector peer group >= 8 **and** peer scan state `ok` (the BUY governance rules of commit 4a906e9).
Estimated	Relative P/E vs same-sector scan median, calibrated confidence, forecast/quality/risk agent votes, distress category, and the US ISIN coverage from the flag-gated resolver (measured only in the isolated run; the production flag is not enabled). These are model outputs, not facts.
Cached	Everything is cached provider data, not live quotes: prices are 1.9-3.2 days old, annual figures are FY2025 (period end 2025-12-31, median 289 days old), and the peer benchmarks come from persisted scan caches (13 h old for six markets, 0.8 h for Germany). Nothing here is a live quote.

Summary (all 176 companies analysed, 0 errors, 0 lookup failures, 0 degraded providers)

Country	Sampled	Evidence P/W/B	Verified BUY	Other BUY	REVIEW	ABSTAIN	No price	ISIN issues	Price age med/max	Peer benchmark (cachedAt -> expires)	Status
US	26	26/0/0	0 (-)	0	21	0	0	4 missing (AMZN, ASML, ETN, KO)	1.9d / 2.9d	2026-10-15T21:42-21:43Z -> 2026-10-16T21:42Z	WARN

Status rule (unchanged): BLOCK = >20% of sample evidence-blocked/no coverage; WARN = any evidence BLOCK/WARN name, non-fresh peer benchmark, BUY share >30%, or missing ISIN/price; else PASS. US is WARN only because 4 ISINs are unresolved; GB/FR/SE are PASS on evidence, but see defect D1 (their benchmarks expire tonight). `REVIEW`/`ABSTAIN` are governance actions; `ACCEPT` = the remainder (call is a stated HOLD_OR_WATCH or BUY).

Calls per country

Country	BUY_CANDIDATE	HOLD_OR_WATCH	NO_RECOMMENDATION	Fail-closed BUY (benchmark unavailable)
US	0	5	21	-

FR	0	9	16	-
IT	1	4	20	-
SE	0	4	21	-
NO	1	8	16	MEDI
DE	0	2	23	-

Per-country detail

USA (NASDAQ+NYSE) - WARN

- Evidence 26/26 PASS (SEC EDGAR). Calls: 5 HOLD_OR_WATCH, 21 NO_RECOMMENDATION; no BUY.
- ISIN: 22/26 resolved by the GLEIF + OpenFIGI resolver (licence-clean), **4 unresolved: AMZN, ASML, ETN, KO** (ambiguous/no match returns no ISIN by design). Analysis is unaffected. This is an **estimate of coverage measured in the isolated run**; production has the flag off, so production still reports 26/26 missing until a deploy approval turns it on.
- Fundamentals: FY period ends median 289 d / max 384 d old; prices 1.9 d / 2.9 d.
- Annual period age median/max: 289 d / 384 d (n=26). Distress: {'ELEVATED_RISK': 2, 'LOW_RISK': 16, 'INSUFFICIENT_DATA': 7, 'HIGH_RISK': 1}.

UK (LSE) - PASS

- Evidence 25/25 PASS (FCA NSM / OAM official). **Verified BUY_CANDIDATE: BHP** (conf 0.67, distress LOW_RISK, 10 same-sector peers, 6 agents positive except comparison -0.3 so it is not P/E-only).
- RIO moved HOLD_OR_WATCH -> NO_RECOMMENDATION vs the 02:57Z run: calibrated confidence 0.531 is below the 0.55 accept threshold (scan benchmark refreshed 2026-10-15 21:44Z); no defect.
- Annual period age median/max: 289 d / 398 d (n=25). Distress: {'LOW_RISK': 9, 'ELEVATED_RISK': 5, 'INSUFFICIENT_DATA': 8, 'HIGH_RISK': 2, 'NOT_APPLICABLE': 1}.

France (Euronext Paris) - PASS

- Evidence 25/25 PASS (ESEF). 9 HOLD_OR_WATCH, 16 NO_RECOMMENDATION; no BUY. Distress: 6 HIGH_RISK names in the sample (not BUY-eligible by rule).

- Annual period age median/max: 289 d / 411 d (n=25). Distress: {'NOT_APPLICABLE': 4, 'INSUFFICIENT_DATA': 8, 'HIGH_RISK': 6, 'LOW_RISK': 4, 'ELEVATED_RISK': 3}.

Italy (Euronext Milan) - WARN

- Evidence 22 PASS / 3 BLOCK, all three fail-closed and **unchanged since Update 5**: A2A (parent ESEF not available: the packages found belong to A2A Energia S.p.A.), MB (Mediobanca, 6-month transition-period ESEF, never annualised), REC (Recordati, 1-day duration contexts, filer defect). Governance ABSTAIN on all three; a fourth ABSTAIN, G (Generali), is a low-confidence (0.33) abstention with evidence PASS.
- **Verified BUY_CANDIDATE: PIRC (Pirelli).** The Update 5 open item is now confirmed live under the BUY governance rule: distress LOW_RISK, 22 same-sector peers (rule needs >= 8), evidence coverage 0.94, call stays BUY_CANDIDATE. Borderline: calibrated confidence **0.5502 vs the 0.55 accept threshold**; comparison vote 0.0, so valuation is neutral and the call rests on fundamental/quality votes.
- Italy remains an evidence WARN market for as long as the three source defects exist; no official filing that would unblock them was found since Update 5 (no new retrieval was attempted: non-bulk, read-only run).
- Annual period age median/max: 289 d / 289 d (n=25). Distress: {'ELEVATED_RISK': 2, 'NOT_APPLICABLE': 12, 'LOW_RISK': 4, 'INSUFFICIENT_DATA': 5, 'HIGH_RISK': 2}.

Sweden (Nasdaq Stockholm) - PASS

- Evidence 25/25 PASS. 4 HOLD_OR_WATCH, 21 NO_RECOMMENDATION, **no BUY** (SKA.B was BUY_CANDIDATE in the 02:57Z run, now HOLD_OR_WATCH at confidence 0.5503 after the benchmark refresh; ALFA, ASSA.B, ERIC.A, ERIC.B moved HOLD -> NO_RECOMMENDATION). 2 ABSTAIN (INDU.A, INDU.C: confidence 0.34).
- Fundamentals period median 289 d, max 320 d.
- Annual period age median/max: 289 d / 320 d (n=25). Distress: {'LOW_RISK': 14, 'ELEVATED_RISK': 2, 'INSUFFICIENT_DATA': 5, 'NOT_APPLICABLE': 4}.

Norway (Euronext Oslo) - WARN

- Evidence 25/25 PASS. **The 10 BUY_CANDIDATEs of the 02:57Z run are now measured live (previously derived from the audit table):** AKSO, BNOR, SNTIA -> REVIEW (ELEVATED_RISK distress); DOFG, SOFF, SOMA -> REVIEW (distress INSUFFICIENT_DATA); EPR -> REVIEW (peer group 5 < 8); MOWI -> REVIEW (confidence 0.51 < 0.55); YAR -> HOLD_OR_WATCH; **HAUTO remains BUY_CANDIDATE** (verified: LOW_RISK, 29 peers, conf 0.63, not P/E-only: comparison +0.6, quality +0.65, forecast +0.2). Caveat from the earlier audit still applies to HAUTO: fundamental vote is slightly negative (-0.05) and it trades at an extreme P/E discount (6.8 vs 17.6), likely one-off or cyclical earnings; it uses 289-day-old annual figures. Treat as an analyst-review item, not a clean BUY.
- MEDI: fail-closed (valuation benchmark unavailable for its sector, peer group < 8) -> NO_RECOMMENDATION. BUY share is now 1/25 (4%), below the 30% concentration warning, so the earlier concentration finding is **resolved** by the implemented rule.
- Status WARN solely because of the freshness defect D1 and the single HAUTO caveat; there is no evidence BLOCK/WARN.
- Annual period age median/max: 289 d / 289 d (n=25). Distress: {'NOT_APPLICABLE': 3, 'ELEVATED_RISK': 4, 'LOW_RISK': 11, 'INSUFFICIENT_DATA': 5, 'HIGH_RISK': 2}.

Germany (Xetra) - WARN

- Evidence 21 PASS / 4 WARN / 0 BLOCK. WARN names (CBK, HNR1, MUV2, TLX) have no official fundamentals source: CBK and TLX are fail-closed because the SEC ticker lookup returned a different issuer (Commercial Bancgroup Inc., Telix Pharmaceuticals) - correctly rejected; HNR1 and MUV2 have no SEC CIK. All four are NO_RECOMMENDATION. No BUY; 2 HOLD_OR_WATCH. (Update 5 had 23 PASS / 2 WARN: the extra two WARNs are HNR1 and TLX; their calls did not change.)

- Peer benchmark `XETRA.json` cachedAt 2026-10-16T09:57:37Z (timer-produced; 150 rows) -> state `ok` for 25/25. The systemd timer `biap-global-de-benchmark.timer` is enabled and last result `success`; next run 2026-10-17T09:57:22Z.
- Fundamentals: 14/25 carry a period age (median 289 d, max 381 d); 11 have PERIOD_UNKNOWN (share-count/benchmark based). Prices 3.2 d old (with Sweden, the oldest of the seven).
- Annual period age median/max: 289 d / 381 d (n=14). Distress: {'NOT_APPLICABLE': 7, 'LOW_RISK': 4, 'ELEVATED_RISK': 8, 'INSUFFICIENT_DATA': 6}.

Unresolved defects and risks

#	Defect	Impact	Owner decision needed
D1	**Peer benchmarks of US, GB, FR, IT, SE, NO expire 2026-10-16 ~21:42-21:46Z** (hard 24 h limit, `service._scan_peer_state`; cachedAt 2026-10-15 21:42-21:46Z). Only Germany has a refresh timer.	After expiry all valuation comparisons fail closed: BHP, PIRC, HAUTO -> NO_RECOMMENDATION, MEDI-style 'benchmark unavailable' reasons across the six markets, until a scan is run. Safe (fail-closed), but the BUY results above are time-limited to roughly 11 hours from this run.	Approve a bounded controlled refresh (or extending the DE-style timer to the other six markets). Not done here: no scans, no timers.
D2	Germany timer margin: cache expires 09:57:37Z (24 h after cachedAt) but the timer fires at 09:57:22Z +/- 1 min `AccuracySec` and takes ~15 s, so there is **0-60 s of fail-closed time every day** and any run slip beyond 24 h makes DE fail closed. Update 6 stated a 30 h window; that is the scan-read limit, the peer-benchmark limit is 24 h.	Daily sub-minute (worst case longer) window with no DE benchmark.	Shorten the cadence (e.g. 20 h) in `deploy/systemd`; requires a code change + approved timer re-install. Not changed here.
D3	Italy A2A / Recordati / Mediobanca evidence BLOCK (source defects, see Appendix).	3/25 fail-closed; correct.	Parent ESEF from OAM 1INFO; corrected Recordati package; Mediobanca stays blocked until a 12-month statement exists.
D4	US ISIN coverage: resolver flag off in production; 4/26 unresolved even with it on.	ISIN shown as missing for all 26 in production today; analysis unaffected.	Approval to enable `BIAP_GLOBAL_US_ISIN_RESOLVE` at deploy.
D5	Germany: 4 names with no official fundamentals source (CBK, HNR1, MUV2, TLX); 11 with unknown period.	Fail-closed NO_RECOMMENDATION.	None required; improvement item.
D6	Price and fundamentals age: prices 1.9-3.2 d, annual figures 289 d median (FY2025; no interim/TTM evidence outside US/DE).	Cached, not live. Reported honestly in every row.	Interim evidence for non-US markets is future work.
D7	Borderline results: PIRC confidence 0.5502 vs 0.55; SKA.B 0.5503; RIO 0.531.	Calls can flip on a data refresh.	None; review before presenting.

Closed since Update 5: Norway BUY concentration (10 -> 1, measured live); PIRC post-rule status (confirmed BUY); DE timer installed and verified (Update 5/6 comments on PR #52); full suite re-run (1442 passed).

CI status of the PR heads (checked 2026-10-16 ~10:35Z)

PR	Head	backend	global-backend	android-bundle	typecheck	android-installable-apk / build-apk
#52	`1da5cd6`	success	success	success	-	skipped (job)
#54	`5671891`	success	-	success	success	skipped (PR runs)

No branch protection on `main`, so no check is formally 'required'. Both heads are unchanged since Update 6. Mergeable: both `MERGEABLE`; #54 is a draft.

GO / NO-GO

PR #52 - NO-GO for merge today (technically ready). CI is green, 1442 tests pass, BUY governance verified live (of the 10 Norwegian BUYs, 8 routed to REVIEW, 1 to HOLD_OR_WATCH, 1 (HAUTO) stays BUY; PIRC confirmed), Italy fails closed correctly, and nothing regressed in seven countries. Merging is nevertheless a deploy action: the diff touches `analysis/**` and `deploy/systemd/**`, which are path triggers of `deploy-backend.yml` on push to `main`. It becomes GO when (1) the owner explicitly approves a production deploy window, and (2) D1 is decided (refresh or timer for the six non-DE markets) so that the BUY results do not silently fail closed hours after the deploy, and ideally (3) D2 cadence is shortened.

PR #54 - NO-GO for merge today (technically ready). Draft, mergeable, CI green on `5671891` (backend, android-bundle, typecheck). It is a one-line mobile schema fix (`ios.icon`) with no runtime effect on the analysis engine, but merging touches `mobile/**`, which triggers Expo EAS build and (via `workflow_run`) the backend deploy workflow. GO once the deploy window is approved; merge after or together with #52's window, not before.

Nothing was merged, deployed, restarted or downloaded in bulk. Preserved untouched: historical company data, ESEF archives, DMA agents, rollback snapshots (`backup-*`, `*.prev`), the other session's `/dev/shm/val-20261016c` copy.

Appendix - earlier report content (as of Update 5, preserved for history)

Numbers in the summary tables of this appendix are **superseded** by the Update 7 sections above; the investigations below remain as written.

- Code validated: `d66fc6753347e4cf7c3734044a4520d5d002fa4c` (PR #52 runtime code). Branch tip `f5b6fb48d5f276a9abdab564816d351df3838abe` only adds a CI pin (`expo-doctor@1.20.4`); no runtime change.
- Test window (UTC): 2026-10-16T01:23:57.756228+00:00 .. 2026-10-16T01:48:51.640054+00:00 (DE re-run after bounded refresh: 2026-10-16T01:48:41.641401+00:00 .. 2026-10-16T01:48:51.640054+00:00)
- CI on branch (PR #52): global-backend, backend, android-bundle all PASS; android-installable-apk skipped on PRs. Validated code SHA `d66fc6753347e4cf7c3734044a4520d5d002fa4c`; report commit is the branch tip at push time.
- Mode: `BIAP_GLOBAL_ONLINE_FIRST=1`, in-process API on an isolated copy of the cached provider data; no bulk downloads, nothing written to production data.
- Sample: top companies by market cap from each exchange's deep-scan cache (25 per market, 13 each for NASDAQ/NYSE).
- Data is real cached provider data, **not live quotes**: price age is median 1.5-2.8 days (see table).

- BUY_CANDIDATE: none; fail-closed BUY (benchmark unavailable): none
- Finding: 2/25 names evidence-WARN

Germany bounded refresh (approved 2026-10-16)

- Before: peer-scan cache stale for 25/25 (cachedAt 2026-10-14T08:21Z), all NO_RECOMMENDATION, no BUY possible.
- Action: one bounded `scan_global_market(DE, XETRA, deep_limit=25, time_budget_sec=480)` run, online-first, executed **only against the isolated temp data copy**. Production `/var/lib/biap-global` was not written (production `scan-cache/DE/XETRA.json` mtime still 2026-10-14 08:21Z).
- Scan result: status NO_RECOMMENDATION, rankingEligible true, 406 discovered / 403 screened (99.26%), fundamental coverage 98.77%, 405 deep-analyzed, 0 screening errors; run took 19 s. New cachedAt 2026-10-16T01:48:32Z.
- After: peer state ok 25/25; calls NO_RECOMMENDATION 23, HOLD_OR_WATCH 2; evidence PASS 23 / WARN 2 (CBK, MUV2) / BLOCK 0; no missing price/ISIN; no BUY.
- The refreshed file was subsequently promoted to production under a separate approval (see next section).

Temporary validation copy removal

- 29,329 files, 467 MB, no hardlinks. Compared against `/var/lib/biap-global` by SHA-256: 29,327 identical, 0 missing from production, 2 differing.
- The 2 differences carry no unique content: AAPL `latest.json` differs only in `fetchedAt` (production is newer); `isin_lei.sqlite3` has identical 189,932 rows, only `meta.builtAt` differs (copy was rebuilt at validation time).
- Deleted only `/home/ubuntu/biap-validation-20261016/data`. Kept: per-ticker results `out/`, `summary.json`, `run.log`, `tools/`, code copy `src/`, and `de-refresh/` (pre-refresh DE results + fresh XETRA.json). Production data, backups, ESEF archives, DMA agents and rollback snapshots untouched. Free disk now 8.9 GB.

Germany cache promotion (approved 2026-10-16)

- Integrity: valid JSON, schemaVersion 3, DE/XETRA, 150 deep rows, 0 rows without company; same ticker universe as previous except 7 swapped names; status NO_RECOMMENDATION, rankingEligible true.
- Provenance: produced by `scan_global_market` at code `d66fc67` from a SHA-256-verified copy of production data (online-first); sha256 `50eb260dba43...`.
- Freshness: cachedAt 2026-10-16T01:48:32Z; the peer benchmark is valid for 24 h (**expires 2026-10-17T01:48Z**, then DE fails closed again until the next refresh).
- Promotion: atomic replace of `/var/lib/biap-global/scan-cache/DE/XETRA.json` (530,485 -> 544,932 bytes). Nothing else written; no service restart.
- Rollback: previous file preserved with checksum at `/var/lib/biap-global/backup-pre-de-scan-promote-20261016T015539Z/` (ROLLBACK.txt holds the copy command).
- Verified on production API 8091 after promotion: DE/SAP sector P/E 22.39 present (benchmark restored), call NO_RECOMMENDATION.

Italy evidence-BLOCK investigation (official sources, online)

Name	Official finding	Verdict
A2A (A2A S.p.A.)	GLEIF confirms LEI 81560076E3944316DB24 = A2A S.p.A. The ESEF packages filed under that issuer in OAM 1INFO carry entity LEI 815600B7FD80E48C1896 = **A2A Energia S.p.A.** (a subsidiary). filings.xbrl.org has no entity for A2A S.p.A.	Correctly BLOCK: the parent's own ESEF is not on the public aggregator; the subsidiary's figures must not be used. Needs the parent's package from OAM 1INFO / issuer IR.
MB (Mediobanca)	Official FY2025 ESEF (filed 2026-04-07/15, 0 errors) covers a **6-month transition period 2025-07-01..2025-12-31**; income-statement facts use issuer extension tags; no 12-month figures.	Correctly BLOCK: never annualized (BLOCK_NO_12_MONTH_INCOME_STATEMENT). Prior FY (to 2025-06-30) net income 1,332.5M exists but is stale. No TTM derivable.
REC (Recordati)	Official FY2025 ESEF (0 errors) contains Revenue 2,618.4M and ProfitLoss 443.6M, but the duration contexts are **tagged 2025-12-31 -> 2026-01-01 (one day)**, a filer tagging defect. Equity is an instant and is read.	Correctly BLOCK: a 1-day "annual" period is rejected. Net income corroborates against the equity-statement column (443.6M); revenue does not. Recommend asking the issuer/OAM for a corrected package; no code change.

No code was changed for Italy: all three blocks are source defects or a legitimate short period, and the engine fails closed on them.

Norway BUY_CANDIDATE audit (10 names)

All ten rest on FY2025 annual figures dated 2025-12-31 (289 days old; no interim/TTM evidence for Norway), relative P/E discount to a same-sector scan median, evidence PASS (coverage 0.875-1.0, official ESEF), and decision confidence 0.56-0.67 vs accept threshold 0.55. No contradictions were recorded.

Ticker	Sector	P/E vs sector	Peers	Distress	Conf	Flags
AKSO	Energy	7.5 vs 19.5	12	ELEVATED_RISK	0.58	elevated distress, extreme discount, near threshold
BNOR	Energy	16.2 vs 19.5	12	ELEVATED_RISK	0.58	elevated distress, near threshold
DOFG	Industrials	6.9 vs 17.6	29	INSUFFICIENT_DATA	0.56	no distress assessment, extreme discount, near threshold
EPR	Cons. Discr.	17.1 vs 23.6	5	LOW_RISK	0.63	small peer group
HAUTO	Industrials	6.8 vs 17.6	29	LOW_RISK	0.63	extreme discount, fundamental vote negative (-0.05)
MOWI	Cons. Staples	12.8 vs 22.7	6	INSUFFICIENT_DATA	0.57	no distress assessment, small peer group, near threshold
SNTIA	Industrials	14.1 vs 17.6	29	ELEVATED_RISK	0.58	elevated distress, near threshold
SOFF	Energy	4.2 vs 19.5	12	INSUFFICIENT_DATA	0.61	no distress assessment, extreme discount (likely one-off earnings)
SOMA	Energy	6.3 vs 19.5	12	INSUFFICIENT_DATA	0.61	no distress assessment, extreme discount, fundamental vote negative (-0.05)
YAR	Materials	7.2 vs 23.4	4	LOW_RISK	0.67	small peer group, extreme discount

Assessment (counts): 3 BUYs carry ELEVATED_RISK distress; 4 have no distress assessment; 3 rest on peer groups of <=6; 6 trade at <40% of the sector P/E (typical of one-off or cyclical earnings); 2 have a non-positive fundamental vote and are carried only by the relative-P/E comparison; every one uses 289-day-old annual earnings. Only **EPR, HAUTO, YAR** carry LOW_RISK distress, and each still has one of the flags above. **None of the 10 should be presented as a clean BUY.**

Governance rule - approved and implemented globally (commit 4a906e9, all markets via `service._analysis_payload`): BUY_CANDIDATE is routed to REVIEW when (1) distress is not LOW_RISK (NOT_APPLICABLE is allowed; unknown/insufficient data counts as unverified), (2) the same-sector peer group has fewer than 8 valid companies, or (3) relative P/E is the only positive signal. Applying the rule to the table above, all 10 names route to REVIEW (AKSO/BNOR/SNTIA/DOFG/MOWI/SOFF/SOMA by distress, EPR/MOWI/YAR by peer count, HAUTO and SOMA by P/E-only); this is derived from the audit table, not a live re-scan. Regression coverage: `analysis/tests/test_buy_governance_rules.py`, 236 parametrised cases across every market. Interim/TTM evidence for Norway remains future work.

USA ISIN resolution (revised 2026-10-16)

- **Superseded approach:** the earlier SEC 13(f) CUSIP -> ISO 6166 derivation is removed (commit 4a906e9). CUSIPs are CGS-licensed, and no restricted CUSIP dataset is used without confirmed licensing.
- **Current resolver (`analysis/global_markets/us_isin.py`):** legally open sources only - GLEIF (CC0) and OpenFIGI. Flag-gated, best effort, pure functions, nothing persisted. Ambiguity returns no ISIN.
- **Missing ISIN never invalidates analysis:** a US equity with no ISIN is still analysed from SEC filings and market data; the ISIN is reported as unresolved only. The earlier "25/26 resolved" figure came from the removed CUSIP chain and is no longer a claim of this report.
- Status: resolver and tests merged on the PR #52 branch; production wiring and live coverage measurement are pending deploy approval.

Expo CI failure

- Root cause: unpinned `npx expo-doctor` resolved 1.21.4, whose schema check rejects `ios.icon` pointing at a PNG (`mobile/app.json`).
- Isolated, deploy-safe fix on PR #52: workflow pins `expo-doctor@1.20.4` (check still enforced).
- Real fix prepared in separate draft PR #54 (removes the redundant `ios.icon`): its CI runs unpinned expo-doctor and **passes** (android-bundle, typecheck). Merging it to main triggers Expo EAS build and the backend deploy workflow (`mobile/**`), so it is held for an approved deploy window.

Remaining failures and warnings

1. **Italy**: A2A needs the parent's own ESEF from OAM 1INFO; Recordati needs a corrected package from the issuer; Mediobanca stays blocked until a 12-month statement exists.
2. **Germany**: production benchmark fresh only until 2026-10-17T01:48Z; CBK and MUV2 evidence WARN. The first controlled refresh was run 2026-10-16T02:50Z (see below). A lightweight 24 h online-first benchmark refresh is implemented (`benchmark_refresh.py`; atomic, validated, keeps one previous generation, failed refresh leaves the cache untouched and fails closed). The systemd timer units are in `deploy/systemd/` but NOT installed.
3. **Norway**: the 10 flagged BUYs now route to REVIEW under the implemented rule (live re-scan pending deploy).
4. **USA**: licence-clean resolver (GLEIF + OpenFIGI) implemented, flag-gated; live ISIN coverage not yet measured.
5. **CI/deploy**: PR #54 must wait for a deploy window; PR #52's CI relies on the doctor pin until then. Italy A2A parent ESEF and Recordati corrected filing remain unresolved; evidence BLOCK retained.
6. Sample is top-by-market-cap from cached data (prices 1-3 days old), not live quotes or the full universe.

Decision-stability evidence

- 8 regression tests (`analysis/tests/test_global_decision_stability.py`): missing/stale/expired cache never yields BUY; fresh-to-stale never flips NO_RECOMMENDATION to BUY; contradiction preserved while fresh; legitimate discount BUY still allowed; identical evidence gives identical decisions.
- Full backend suite re-run 2026-10-16 on tip 4a906e9 (`pytest analysis/tests`, online-first flag off as in CI): **1439 passed, 0 failed**. Targeted run of governance, decision-stability, service/source-safety, decision-support, US-ISIN and benchmark-refresh tests: 279 passed.
- Test-isolation caveat (resolved, see "Controlled Germany refresh" below): with `BIAP_GLOBAL_ONLINE_FIRST=1` exported, 35 disk-persistence tests used to fail; `tests/conftest.py` now pins persistence mode per test.
- CI on 4a906e9 (PR #52): BIAP Global check and Release candidate check green. PR #54 (Expo doctor) CI green. Nothing merged, nothing deployed.
- Live example: Norway MEDI (P/E 32.1, no sector benchmark) -> REVIEW / NO_RECOMMENDATION "valuation benchmark unavailable".

Controlled Germany refresh (2026-10-16, manual, single run)

Command: `BIAP_GLOBAL_ONLINE_FIRST=1 python -m global_markets.benchmark_refresh DE XETRA` against `/var/lib/biap-global`, 17 s, status **OK**. No timer installed, no deploy, 8091 not restarted.

Item	Before	After
`scan-cache/DE/XETRA.json` cachedAt	2026-10-16T01:48:32Z (interactive)	2026-10-16T02:50:11Z (benchmark-refresh); 24 h expiry moves to 2026-10-17T02:50Z
deep rows / screening coverage / rankingEligible	150 / 99.26% / true	150 / 99.26% / true
Analysis ledger (405 analysed, evidence PASS 372 / WARN 17 / BLOCK 16, BLOCKED 11, buyQualified 0)	identical	identical
Calls + evidence status, 146 shared tickers	-	**0 changes**; distribution 118 NO_RECOMMENDATION/PASS, 16 /BLOCK, 12 /WARN, 4 HOLD_OR_WATCH/PASS; no BUY
Prices and filing periods, shared tickers	-	0 differences (no new prices fetched; existing data only)

Item	Before	After
Storage	-	+575,090 bytes = new XETRA.json (+1.5 KB) and the single `.prev` rollback generation (544,932 B); no other file created or modified

Findings to be aware of (not defects, not hidden): - The 150-row ranked sample changed membership by 4 names: out ADS, BAS, ENR, IFX; in BMW, DTG, HEI, VOW3 (all NO_RECOMMENDATION). Scores of 12 shared names moved (e.g. SAP 0.192 -> 0.096, SIE 0.207 -> 0.241) with identical prices, i.e. the refresh re-ranks peers; calls did not change. The ranking gate count WATCHLIST_HOLD went 5 -> 4 and Top-10 swapped ENR/RHM/SAP order; ENR's own new call was not individually re-analysed. - `batchLimit` is no longer present in the payload (interactive-scan field only). - Rollback: `mv XETRA.json.prev XETRA.json`; pre-refresh copy also kept outside the data dir. - Not done: a full per-company re-analysis of the 25 DE names through `/global/analyze` after the refresh. A disk-quota limit prevented building an isolated data copy; running it against the live data dir was rejected to keep historical datasets untouched.

Persistence tests vs online-first

All 35 failures were persistence-mode tests (market/universe/fundamentals caches, history store, FX, AMF, Brreg, exchange shares, etc.) that assert files are written and inherited the ambient `BIAP_GLOBAL_ONLINE_FIRST=1`. Fix (no test disabled or weakened): `tests/conftest.py` autouse fixture `_persistence_mode_by_default` removes the flag per test; `tests/test_global_online_first.py` keeps the explicit online-first assertions (it sets the flag itself) and gains a leak test. Result: **1440 passed, 0 failed with the flag exported to 1 and with it unset.**

Italy follow-up

- A2A, Recordati, Mediobanca: evidence BLOCK retained (no new official filing available; unchanged cause analysis above).
- Other 22 Italian names (2026-10-16 run on d66fc67, before the BUY-governance rule): 17 NO_RECOMMENDATION/PASS, 4 HOLD_OR_WATCH/PASS, 1 BUY_CANDIDATE/PASS (Pirelli, PIRC: distress LOW_RISK, but its comparison agent had no valid P/E). Under the new rule PIRC needs a verified same-sector peer group of at least 8; this was not re-run after the rule landed, so its post-rule call is **unconfirmed** and must be checked after deploy.
